

STATUS AND PLANS: COOL TAG BROWSER

Alexander SHARMAZANASHVILI
Georgian Team

30 November, 2011

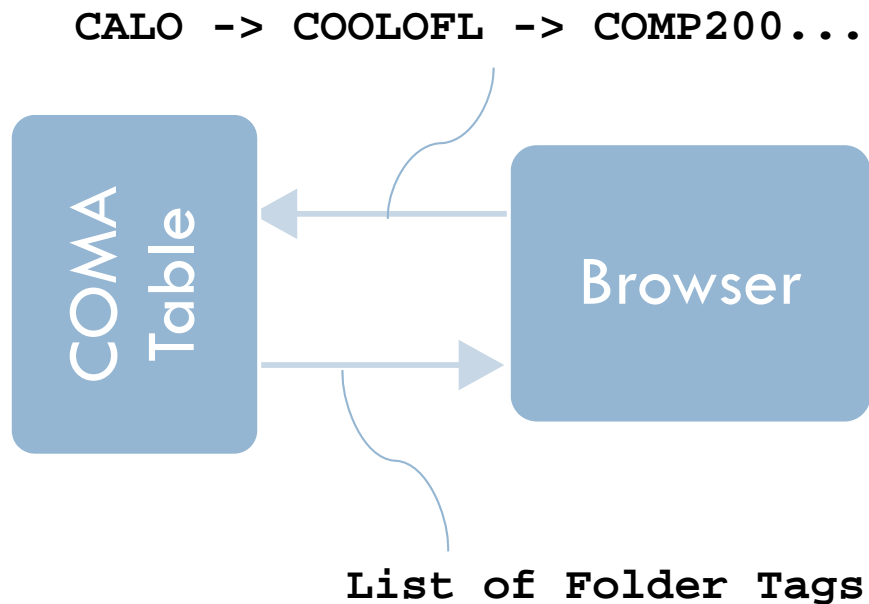

Status

- DB connectivity problem has been solved. Now we are able to send queries to DB directly from browser.
Thanks Elizabeth, Gancho, Andrea!
- Currently we are working on 3 test local interfaces. We are following aim to have firm solutions and tools for making queries and getting data from COMA tables

Status / Local Interface #1

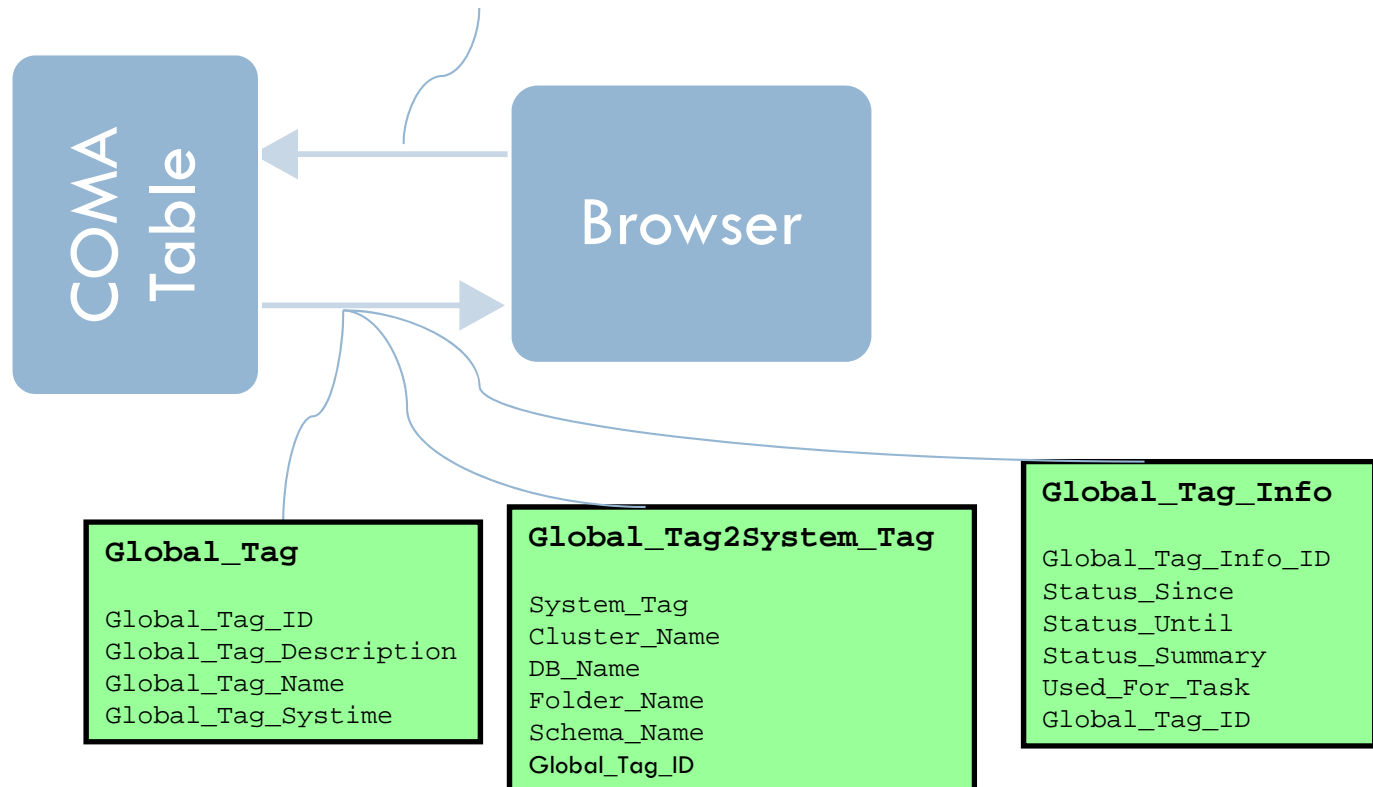

- DB Folder Browser Menu

Status / Local Interface #2

□ DB Table Query

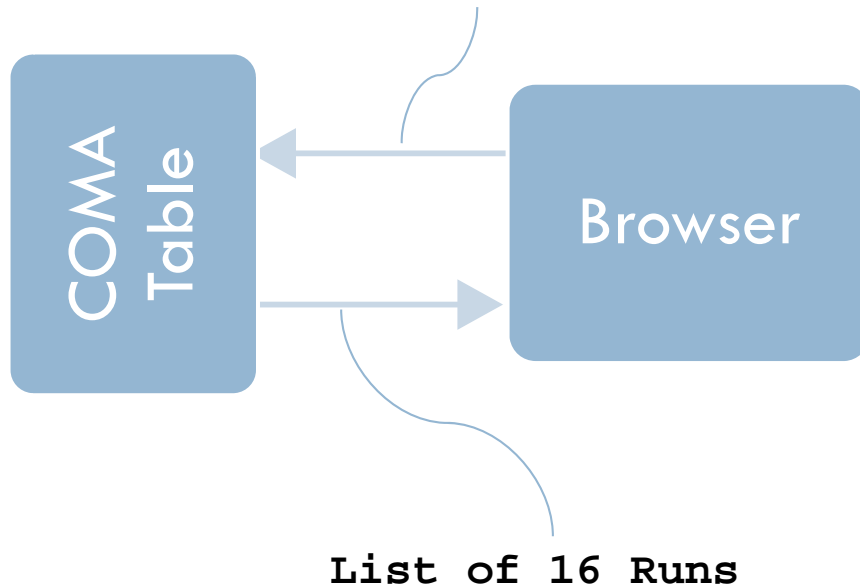

{Global_Tag}{Global_Tag_System_tag}{Global_Tag_Info}

Status / Local Interface #3

- COMA Report Input Menu

`data_7TeV{192206} -> COMA -> AMI_Tags -> f415_m1025_m1024`

Future Steps

- Getting Global Tag data same we have from CherryPy, from COMA tables and compare performances. Then we will be able to optimize data getting paths
- Add missing information about Global tags from COMA
- Add new functionalities of Browser considering data we can get from COMA and users community requirements
